

The transmitters series **RU-1...**,and **RUI-2...**in single or double version are proposed for signal conversion from resistive temperature sensors Pt100, Pt500, Pt1000, Ni1000, Ni10000 and resistive sensors OV100 (0 to 100  $\Omega$ ), OV105 (5 to 105  $\Omega$ ) and OV1000 (0 to 1000  $\Omega$ ) to the standard voltage signal 0 to 10V. The output signal has got a linear temperature or resistance dependence. The transmitters are according to the type variant supplied by 24 VDC or 24 VAC. The transmitters are not equipped with galvanic separation between input and output signals. The given degree of ingress protection and possibility of fitting on the mounting bar DIN TS 35 de-terminate the transmitters for use in the distribution cases, boards and panels.

#### Summary of types

## Mounting and putting into service

The transmitter has to be fastened with the help of a holder on the mounting bar DIN TS 35. First we set the upper mandrel of transmitter box holder on the upper bar edge and with the help of a screwdriver push out the lower arrestment mandrel lock. We pull the lower box part to the bar and then free the lock. The transmitter is fastened now. We connect the inputs, outputs and power supply into the respective clamps. We recommend the connecting cable with the wires cross section  $0,35 \pm 2 \text{ mm}^2$ , for the active signals with the screening mantle.

## How to order the transmitter

There have to be given the number of pieces and the type of temperature or resistance transmitter in the order.  
 E. g: 5 pieces transmitters RU-2P .2-DC

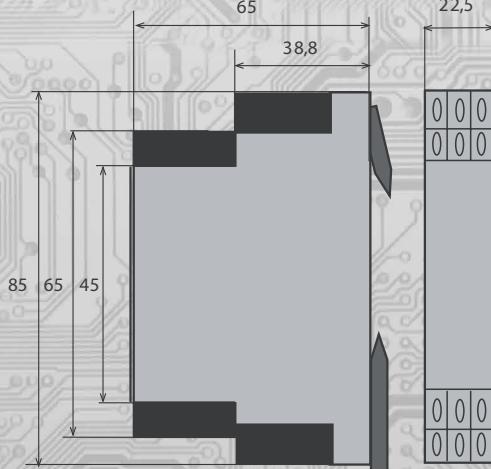

i. e. transmitter for 2x Pt100 input,  
 measuring range  $0 \pm 100^\circ\text{C}$ , with DC power supply.

## Transmitter connection into the circuit

This holds for the RU-2P-DC; connection with a compensation loop

### Remark

1) Transmitters with the supply 24 VAC - terminal board number 5 is connect with GND.
